

HOW TO START A PROJECT

---

**WORK AGILE**

## CONTENT...

- ▶ What is a Agile Team?
- ▶ How do you start a Agile Project?
- ▶ Who should be "The Boss"?
- ▶ How do you handle the daily work in a Agile Team?
- ▶ What is Scrum & Kanban?
- ▶ What type of Tools do You need?

## AGILE DEVELOPMENT IN AGILE TEAMS

- ▶ The main thing we learned in the previous course was that we are unable to plan/know everything that needs to be done at start of Project/Increment/...
- ▶ There will always be unknown's that pop up when work progresses.
- ▶ Agile is as much an attitude in the Team as it is ways of working and tools.

## THE AGILE WORDS...

- ▶ Scrum/Kanban
- ▶ Agile Coach, Scrum/Kanban Master, OPO... handles the Backlogg and the Meetings for new Team. Owns the Team Process!
- ▶ PO (Product Owner)... Keeps track of the path you follow. Needs to be ACTIVE!!

### PROJECT START

- ▶ Make a list of known things that need to be done
- ▶ Create a goal for the project/increment/epic that all in the Team understand
- ▶ Hierarchy in Agile Teams should only be based on knowledge and interest
- ▶ Breakdown of initial list. All team members should participate. Spread knowledge!
- ▶ This Breakdown is the first Backlogg

## THE DAILY WORK

- ▶ Why Weekly Meetings?
- ▶ Why Daily Meetings?
- ▶ Why plan A sprint, who needs planning?
- ▶ Why you shouldn't change content of sprint?
- ▶ Why only prioritize your backlog and use Kanban?
- ▶ Why Stable Teams are good Teams?... Team Speed!

## SCRUM KANBAN OR SCRUMBAN?

---

- ▶ Adapt process to Your Team!
- ▶ Project startup is often unstable and should be handled using Kanban.
- ▶ Is most of the stuff to be done the coming weeks stable?... Use Scrum.
- ▶ Unstable stuff like bugg reports should always be handled using Kanban.
- ▶ Often a mix of Scrum and Kanban is needed... Scrum-ban!

## INFORMATION HANDLING

- ▶ Backlog needs to be handled, Sorted, Pruned, dump irrelevant Tickets, create new ones... Organize!
- ▶ Team process need to be created and spread.
- ▶ All knowledge accumulated in team needs spreading, "We are helping each other".
- ▶ Use Ticket handling tool and wiki that everyone uses actively .
- ▶ All information created by the team should be editable by everyone!
- ▶ If you find something's wrong, fix it!

## TOOLS

- ▶ There are many tools to help you in the Agile work, but the two , most commonly used are Jira with the Companion app Confluence, both from the Company called Atlassian.
- ▶ Jira handles the Tickets/Items that are to be performed, it also helps in running Kanban/Scrum handles planning, shows what is completed, diagrams, etc...
- ▶ Confluence is where you describe how you work, explain solutions, handle meetings, etc...
- ▶ The idea is that adding information should be **Simple and Quick!**

## LAB, SETUP ENV.

- ▶ Login using N# as the password (number of your computer)
- ▶ Use Firefox as your browser or enable Java scripts on Conqueror.
- ▶ Lexher site <https://lexher.atlassian.net/home/notifications> (open for viewing by everyone)
- ▶ Contains both a Jira and Confluence instance, you need to be invited to be able to login.
- ▶ Different types of users have different access.
- ▶ <https://lexher.atlassian.net/wiki/spaces/DEMO/overview> (Confluence)
- ▶ <https://lexher.atlassian.net/secure/BrowseProjects.jspa> (Jira)

## LAB, START A TEAM ENV.

- ▶ Create a Team
- ▶ Create 5 Issues (at least one each: Story, Bug & Task)
- ▶ Create Weekly Meeting.
- ▶ Create 3 Howtos in Confluence
- ▶ Visualize Jira info in Confluence (use Jira Macro), e.g. Bug status in Weekly meeting.
- ▶ See how Confluence handles versions
